Checks-in, and Balances: a Matter of Time

Ground Rules

Yash Moitra[†]

[†] Delhi International Airport Limited.

Contents

I.	Rule 1 - Variable Name List	1
II.	Rule 2 - Definitions List	1
III.	Rule 3 - Captioning & Numbering	1
IV.	Rule 4 - Authorship & Dating	1
V.	Rule 5 - Methodology Document	1
VI.	Rule 6 - No em dashes	1
VII.	Rule 7 - Typography and generation	2
VIII.	Rule 8 - Title page	2
IX.	Rule 9 - Contents page and numbering hierarchy	2
X.	Rule 10 - PDF knitting default for R Markdown	2

These conventions govern every document, dataset, script, and exhibit in the Pax Forecast Model project. They are binding on all subsequent steps.

I Rule 1 - Variable Name List

A single living registry of variable names is maintained at `Variable_Names.md`. Every variable used anywhere in the model must appear there with its meaning, class/domain, example, and the step in which it is first defined. The list is updated as relevant as the model is built: whenever a step introduces or changes a variable, that same step updates the registry.

II Rule 2 - Definitions List

A single living registry of definitions is maintained at `Definitions.md`, covering every domain term, abbreviation, and concept used in the model. It follows the same update-as-we-go discipline as Rule 1.

III Rule 3 - Captioning & Numbering

Every formula, table, image, diagram, equation, drawing, lemma, assumption, graph, corollary, and theorem is captioned and numbered, sequentially within each class in order of first appearance: Equation (1), (2), ...; Table 1, 2, ...; Figure 1, 2, ... (images, diagrams, drawings, graphs); and the theorem-like statements Assumption, Theorem, Lemma, Corollary, each in its own sequence.

Theorem-like statements are set as a bold label and number followed by a period, then the statement in italics, for example:

Assumption 1. *the statement.*

Variant labels may be primed (for example **Assumption 2'**.) and custom labels are allowed (for example **Assumption C.**). Each exhibit is referred to by its label (for example “by Equation (1)” or “by Assumption 1”), and cross-references to a numbered statement are hyperlinked to it. A running index of all exhibits is kept in `Methodology.md`.

IV Rule 4 - Authorship & Dating

Every document is authored by **Yash Moitra, Delhi International Airport Limited**. Dates are written as **Month DD, YYYY** with a zero-padded day (for example July 03, 2021). The date carried by a document is its actual date.

V Rule 5 - Methodology Document

`Methodology.md` meticulously documents every step of the model: objective, inputs, assumptions, procedure, decisions and their rationale, data treatments and gaps, outputs, and verification. No material step occurs in the model without a corresponding methodology entry.

VI Rule 6 - No em dashes

Em dashes are not permitted in any project document. Where a sentence break or parenthetical is needed, use a comma, colon, semicolon, parentheses, or a hyphen instead.

VII Rule 7 - Typography and generation

Formatted documents use the standard CMU (Computer Modern) font family, both serif and sans serif. Generation and knitting are done through a LaTeX engine wherever practical, so that formatting stays consistent. PDF rendered via LaTeX in Computer Modern is the preferred formatted output.

VIII Rule 8 - Title page

Every document opens with a title page. The date, written Month DD, YYYY and set in Calibri, sits at the top left. The project title, identical across all documents, is set large and bold (Checks-in, and Balances: a Matter of Time). Immediately beneath it, in small bold type, is the document's own name (Overview, Ground Rules, Methodology, and so on). The author line reads Yash Moitra in italics, carrying a superscript dagger that corresponds to a matching dagger on the affiliation footnote. The affiliation, Delhi International Airport Limited, is set in small type at the foot of the page. All text other than the date is set in Computer Modern.

IX Rule 9 - Contents page and numbering hierarchy

Every document carries a Contents page immediately after the title page. Top-level sections are numbered with upper-case Roman numerals (I, II, III, ...) and shown in bold. Subsections are numbered within their section as the section numeral, a dot, and a two-digit zero-padded index (I.01, I.02, ..., III.27), shown with a colon before the title and dotted leaders to the page number. A running footer carries the author (Moitra, Yash) at the left, the page and total (for example i / 155) at the centre, and the month and year at the right.

X Rule 10 - PDF knitting default for R Markdown

Every R Markdown (.Rmd) document defaults to knitting to PDF. Its YAML header declares `output: pdf_document` as the first and default output, rendered through a LaTeX engine (per Rule 7), so that knitting produces a PDF directly, with no extra steps and no manual format selection. PDF is the only intended default target: HTML, Word, and the intermediate .knit.md are never the deliverable. Every new .Rmd follows this from creation.

Maintenance note: the registries (Rules 1 and 2) are not pre-filled speculatively. Each step records the variables and terms it actually introduces, at the point it introduces them.
